MARVLIS™ PSAP Monitor

MARVLIS PSAP Monitor is the latest evolution in public safety offerings by Esri partner, Bradshaw Consulting Services. Leveraging ArcGIS Online, PSAP Monitor provides an intelligent map display of active 911 calls and AVL by integrating with your computer-aided dispatch system in a secure, cloud-based environment. Call volume, distribution, fleet load, and other metrics relay critical information to dispatchers and administrators about the current state of operations.

In addition to operational data, MARVLIS PSAP Monitor has the ability to incorporate a variety of additional data types and feeds to supplement the information-rich map display. Utilize your organizational GIS data from the cloud, via map services from your own ArcGIS Server, or take advantage of the number of online basemaps from Esri such as aerial imagery or street map. Real-time data feeds such as weather warnings and radar, traffic, DOT information and others add awareness of changing conditions.

Jersey City Medical Center EMS utilizes MARVLIS to improve efficiency and operational awareness

- *Secure, cloud-based intelligent map display*
- *Integrates with your CAD*
- *Displays active calls and AVL*
- *Call volume, distribution, fleet load and other metrics*
- *Multi-platform access*
- *Online basemaps and real-time data feeds*
