

# TheAddresser™ First Aid Kit

**BCS** | Bradshaw Consulting Services  
High Performance Solutions

TheAddresser First Aid Kit is the most comprehensive diagnostic utility for E911 address point and street centerline data on the market today. Whether you are fixing addresses, rectifying centerlines for use with CAD, or preparing data for changing NG911 standards, TA First Aid Kit takes the guesswork out of evaluating and identifying critical and non-critical issues that adversely effect the quality, speed, and reliability of your data.

**Addressing**  
Identifies a number of issues affecting the accuracy of E911 Address Points such as Zero Addresses, Duplicates, Out of Range, and more.

**Geocoding**  
Improve your geocoding accuracy by locating and fixing key problems with ranging and attributing such as Zero/Overlapping Ranges, Invalid Geometry and many others.

**Routing**  
Diagnoses centerline routing viability and scans for critical errors such as Linear Direction, Self-Intersecting Segments, Invalid One Ways, Missing/Invalid Impedances and more.

## Simple to Use

TA First Aid Kit is easy to setup

- Load your feature classes
- Map your key fields
- Select the checks to perform
- Hit GO!

## Get Results!

Turn results into action quickly

- Summary report identifying issues by error type and criticality
- Individual feature classes for each error type taking you right to the issue
- Cleaned and linked copies of your source data

TheAddresser First Aid Kit is the quality control and error checking engine of TheAddresser for ArcGIS by Bradshaw Consulting Services. Contact BCS today to learn more about our offerings or to set up a demo!
